1. Sit the student down and remain calm to reassure them. Do not leave the student alone.
2. Without delay shake a blue reliever puffer (Airomir, Asmol, Epaq or Ventolin) and give 4 separate puffs through a spacer (use the puffer alone if a spacer is not available). Use one puff at a time and ask the student to take 4 breaths from the spacer after each puff.
3. Wait 4 minutes. If there is no improvement, repeat steps 2 and 3.
4. If there is still no improvement after a further 4 minutes – call an ambulance immediately (dial 000) and state that the student is having breathing difficulties. Continuously repeat steps 2 and 3 while waiting for the ambulance.

If at any time the student's condition suddenly worsens, or you are concerned, call an ambulance immediately.
